

MODERN APPLICATION DEVELOPMENT (JAVA SPRING BOOT)

ASSIGNMENT-2

Arunima Mohanan
20BCE0357
VIT Vellore

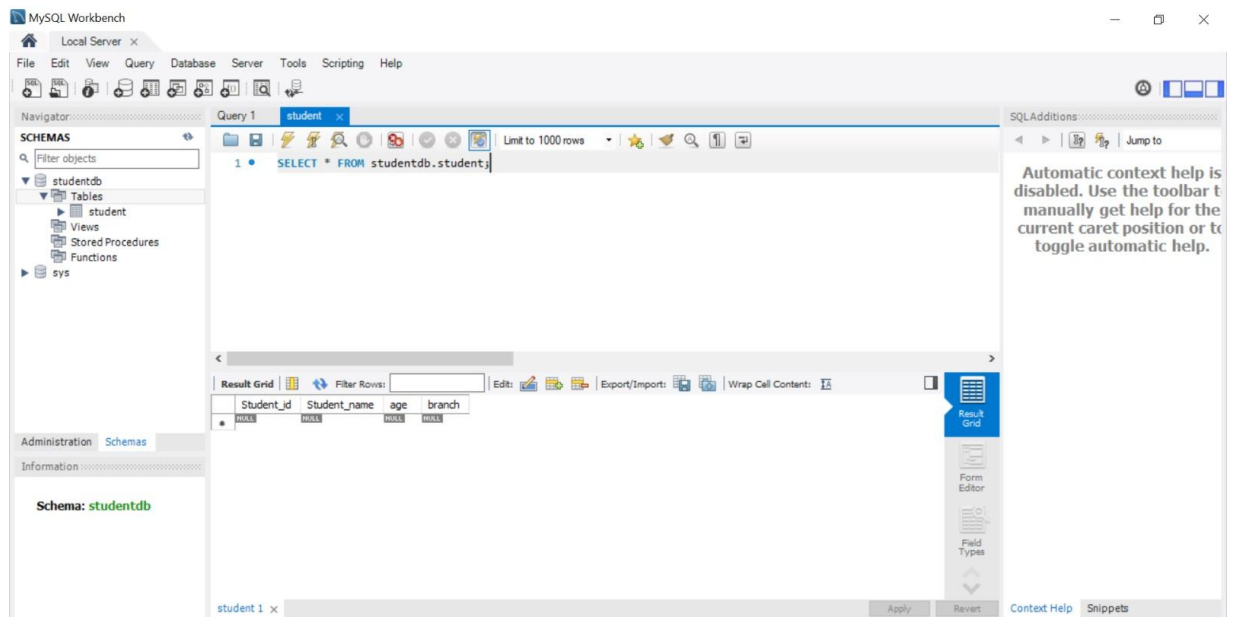

1) Create, update and delete commands in mysql

- CREATE table statement:

```
CREATE DATABASE `studentdb`;
```

```
CREATE TABLE `studentdb`.`student` (  
  `Student_id` INT NOT NULL,  
  `Student_name` VARCHAR(45) NOT NULL,  
  `age` INT NOT NULL,  
  `branch` VARCHAR(45) NOT NULL,  
  PRIMARY KEY (`Student_id`));
```

```
SELECT * FROM studentdb.student;
```

- Insert statements:

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (1, 'Kenny', 20, 'CSE');
```

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (2, 'Peter', 21, 'Civil');
```

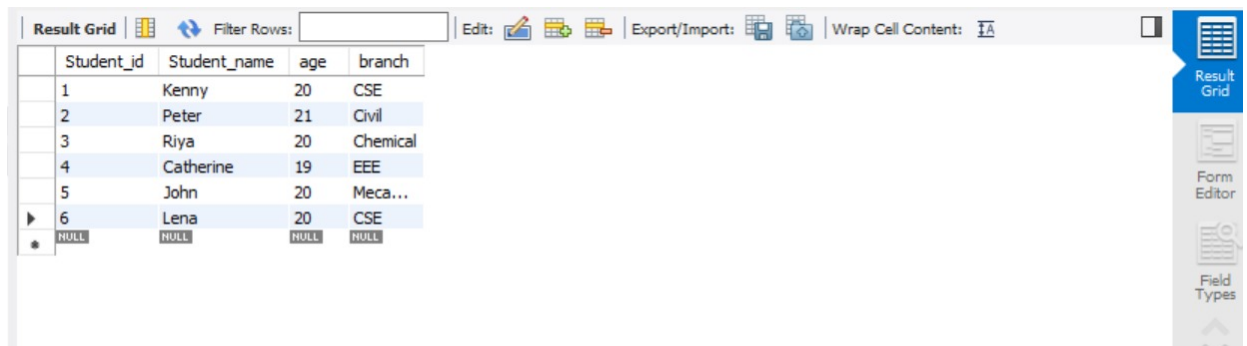

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (3, 'Riya', 20, 'Chemical');
```

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (4, 'Catherine', 19, 'EEE');
```

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (5, 'John', 20, 'Mechanical');
```

```
INSERT INTO `studentdb`.`student` (`Student_id`, `Student_name`, `age`, `branch`)  
VALUES (6, 'Lena', 20, 'CSE');
```

```
SELECT * FROM studentdb.student;
```

The screenshot shows a database management interface with a 'Result Grid' tab. The grid displays the results of a SQL query, showing 6 rows of student data. The columns are 'Student_id', 'Student_name', 'age', and 'branch'. The data is as follows:

Student_id	Student_name	age	branch
1	Kenny	20	CSE
2	Peter	21	Civil
3	Riya	20	Chemical
4	Catherine	19	EEE
5	John	20	Meca...
6	Lena	20	CSE

Below the data rows, there is a row with all NULL values. The interface also includes a 'Filter Rows' search bar, an 'Edit' button, and an 'Export/Import' button. On the right side, there are buttons for 'Result Grid', 'Form Editor', and 'Field Types'.

- Update statements:

```
UPDATE `studentdb`.`student` SET branch='ECE' WHERE Student_id='6';  
SELECT* FROM `studentdb`.`student`;
```

Result Grid				
Filter Rows:				
	Student_id	Student_name	age	branch
▶	1	Kenny	20	CSE
	2	Peter	21	Civil
	3	Riya	20	Chemical
	4	Catherine	19	EEE
	5	John	20	Mecanical
	6	Lena	20	ECE
•	NULL	NULL	NULL	NULL

- Delete statement:

```
DELETE FROM `studentdb`.`student` WHERE (`Student_id` = '3');
SELECT* FROM `studentdb`.`student`;
```

Result Grid				
Filter Rows:				
	Student_id	Student_name	age	branch
▶	1	Kenny	20	CSE
	2	Peter	21	Civil
	4	Catherine	19	EEE
	5	John	20	Mecanical
	6	Lena	20	CSE
•	NULL	NULL	NULL	NULL

2) Create tables and perform joins in mysql

- Table created:

```
CREATE TABLE `studentdb`.`subjects` (
  `Student_id` INT NOT NULL,
  `subject` VARCHAR(45) NOT NULL,
  PRIMARY KEY (`Student_id`),
  CONSTRAINT `Student_id`
  FOREIGN KEY (`Student_id`)
  REFERENCES `studentdb`.`student` (`Student_id`));
```

```

INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('1', 'DBMS');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('1', 'CAO');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('2', 'Urban');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('2', 'STS');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('4', 'VLSI');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('4', 'DIP');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('5', 'Mass
Transfer');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('5', 'Graphics');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('6', 'C');
INSERT INTO `studentdb`.`subjects` (`Student_id`, `subject`) VALUES ('6', 'Java');

```

```

SELECT * FROM studentdb.subjects;

```

Result Grid		Filter Rows:	Edit:	Export/Import:	Wrap Cell Content:
Student_id	subject				
6	C				
1	CAO				
1	DBMS				
4	DIP				
5	Graphics				
6	Java				
5	Mass Transfer				
2	STS				
2	Urban				
4	VLSI				
*	NULL				

- Join statement:

```

SELECT sd.Student_id,
sd.Student_name,
sd.branch,
sd.age,
s.subject
FROM studentdb.student AS sd
LEFT JOIN studentdb.subjects AS s ON sd.Student_id=s.Student_id;

```

Result Grid					
Filter Rows: <input type="text"/>					
Export: <input type="text"/> Wrap Cell Content: <input type="text"/>					
	Student_id	Student_name	branch	age	subject
▶	1	Kenny	CSE	20	CAO
	1	Kenny	CSE	20	DBMS
	2	Peter	Civil	21	STS
	2	Peter	Civil	21	Urban
	4	Catherine	EEE	19	DIP
	4	Catherine	EEE	19	VLSI
	5	John	Mecanical	20	Graphics
	5	John	Mecanical	20	Mass Transfer
	6	Lena	CSE	20	C
	6	Lena	CSE	20	Java

3) Create, update and delete commands in MongoDB

- Insert commands

Inserting single record:

```
db.Student.insertOne({Student_id:"1", name:"Kenny", age:20, branch:"CSE"})
```

```
>_MONGOSH
> use University
< switched to db University
> db.Student.insertOne({Student_id:"1", name:"Kenny", age:20, branch:"CSE"})
< {
  acknowledged: true,
  insertedId: ObjectId("6474477d9f268ccaca1317f6")
}
University>
```
